

The New Paradigm of Disability

A Bibliography

It has been thirty years since the beginning of the contemporary Independent Living Movement. It was a time when the previously separate groups of people with disabilities began to collectively fight for the respect, and demand the civil rights, enjoyed by mainstream America. There are now the first generation of laws protecting the rights of disabled people. Access to employment, transportation, education, and public accommodations is now mandated by Federal law for disabled people. More than ever people with disabilities are participating in American life. But, the mainstream media barely recognizes that disability is an inherent, integral, and inevitable component of the human experience. Nor do newspapers, television, and movies portray the role that society plays in marginalizing and stereotyping disabled people. More often the antiquated myths and stereotypes about people with disabilities are the norm.

From disabled activists using civil disobedience for social justice to university professors with disabilities researching and teaching disability studies, a new, clearly articulated analysis of the disability paradigm has emerged and is taking root throughout the nation and around the world. This new perspective on the human condition needs to be integrated into mainstream media.

Following on the successful Disability Messenger project of the President's Committee on Employment of People with Disabilities this bibliography is intended as a catalyst to further articulate, amplify, and promote this new perspective of disability to allies, potential allies, academics, and policy makers and the media. This bibliography is further demonstration of the power of a community defining itself and articulating its members own collective and individual identity.
